

Data Engineer

At J2 Health, we know that healthcare is complicated and falls short of the experience and outcomes consumers deserve. J2 exists to enable higher value healthcare. We are a team of industry insiders and technologists laser focused on transforming a critical, and underserved part of the ecosystem - provider networks.

As individuals, it's difficult to find the right doctor that meets our medical and personal needs, at affordable costs. Doing their best with unreliable data and disjointed manual processes, healthcare organizations struggle with this too as they decide which doctors should be included in-network on our health insurance plans.

J2 Health brings together best in class data and purpose built software to enable healthcare organizations to optimize provider network performance. We use our technology to power healthcare's best networks and deliver highest value care to patients.

We recently raised a \$4.5M seed round led by Primary Ventures, Tiger Global and BoxGroup and are looking for early team members interested in building a mission driven healthcare company and are not afraid to get their hands dirty.

Responsibilities:

- Design scalable and robust data pipelines that ingest, analyze, and integrate provider and other healthcare data to support J2's best-in-class provider data repository.
- Develop configurable infrastructure for receiving and delivering data, that allows for a variety of client needs and data templates.
- Create modern QC services to monitor data processes and notify product owners as issues occur.
- Work with data science teams to improve automation across all workloads.

Qualifications:

- Strong programming experience in Python and SQL required, along with a proven ability to write readable, well documented code.
- 3+ years of experience in a data engineering role required.
- Experience designing ETL pipelines strongly preferred.
- Hands-on experience with healthcare data preferred.
- Foundational cloud experience required, GCP experience preferred.
- Startup experience a plus.

- Ability to think at a high level and work well with internal stakeholders to translate business needs into data architecture that evolves with the needs of the business.

Please send your resume to recruiting@J2health.com to apply.

Interested? J2 Health is committed to building a diverse and inclusive workplace. It is proven that women and people of color are less likely to apply to a job unless they meet 100% of the qualifications. If you're excited about the role's responsibilities (and feel that you'll knock it out of the park) but don't have the exact qualifications listed, we encourage you to apply!

J2 Health provides equal employment opportunities (EEO) to all employees and applicants for employment without regard to race, color, religion, gender, sexual orientation, national origin, age, disability, or veteran status. In addition to federal law requirements, J2 Health complies with applicable state and local laws governing nondiscrimination in employment in every location in which the company operates. This policy applies to all terms and conditions of employment, including recruiting, hiring, placement, promotion, termination, layoff, recall, transfer, leaves of absence, compensation, and training. J2 Health expressly prohibits any form of workplace harassment based on race, color, religion, gender, sexual orientation, national origin, age, disability, or veteran status.
